Refer to the graft below.

## Simple MA

The normal indicator for show major trend. Refer below :

## Trading using the Scalper technique.

True scalping involves opening and closing a position in seconds or minutes at most. Even though scalping involves the use of leverage and higher leverage means higher risk, the short period of time a forex scalper is in a trade decreases the exposure risk that's inherent in trading or investing due to the holding of a position. If done correctly, scalping provides this additional degree of "risk control" that is not even present in day trading.

### GreatTrader Scalping Technique

#### BUY POSITION.

1. Open metatrader and choose 30 minutes (30M) as at like below.

## Trade Using Day Trader Technique.

**Day trading** refers to the practice of buying and selling financial instruments within the same trading day such that all positions are usually closed before the market close of the trading day. Traders that participate in day trading are called day traders.

Some of the more commonly day-traded financial instruments are stocks, stock options, currencies, and a host of futures contracts such as equity index futures, interest rate futures, and commodity futures.

# TIPS-TIPS

## Scalper Tips.

1. Pairs recommended was 5 pips and below spread.
2. Make sure that you are not trade 15 min before or after the economy news. Please refer <http://forexfactory.com/> for knowing news times
3. Make sure that you open buy position or sell at starting trend at time frame 1 min. Please see the examples as at below

3. Do not open the buy position or sell when time frame 30 minutes show sideways. Please refer

Yellow circle show the sideways-market movement are too slow

4. You are advisable to do training using account demo first before using live account
5. You also are adviseable to take the profit every each pair of currency base on the correct money management to prevent the margin call. Please do the trading without emotional and have the selftrust
6. Always use stop loss. (MetaTrader User Guide : <http://www.alpari-idc.com/en/metatrader4/userguide/index.html> )

### Day Trading Tips.

1. Make sure that you read and understand economy news before trading, if you want detail about the economy news, please read the e book that we provide with this package called "the pocketbook of economic indicator"
2. Do not open any position when pair movement are not follow base on the economy news. This is because of the market is not really stable.
  3. Make sure you are using the trailing stop for maximizing your profit. (Please see manual as a reference)
  4. Trailing stop are different for every each pair and it goes like this

Pair	Trailing Stop
EURUSD	25
GBPUSD	35
USDJPY	25
USDCHF	25
AUDUSD	25
NZDUSD	25
GBPJPY	45
EURJPY	35

3. Make sure when you open buy position or sell at starting trend at 30min
5. Do not open the position at the middle of the trend. Afraid that it will become reversal
6. You are adviseable to not open if the market at the sideways
7. Open position base on the rule that have provide
